ArrowSpan Introduces MAM7700 Wireless Mobile Mesh Solution for Real-time Voice, Video and Data Applications

Patented Multipoint System Enables Real-time Voice, Video and Data Communications for Complex Mobile Operations

Santa Clara, Calif., Oct 15, 2008 – ArrowSpan Inc., a global provider of switching wireless Wi-Fi mesh solutions, today introduced the MAM7700, a patented wireless mobile mesh system that enables real-time voice, video and data communications over an IP network for public safety officers, construction crews, field inspectors, and other mobile units.

The ArrowSpan MAM7700 solution creates a temporary mesh network for these mobile personnel by utilizing the less crowded 700MHz band. The system's multi-radio and multi-channel design also eliminates wireless signal interference and traffic conflict problems that often occur with other mesh network products, ensuring reliable communications in areas where traditional wireless networks are not available.

The ruggedized, portable MAM7700 unit can easily be carried by mobile users or transported in a vehicle. Because ArrowSpan's patented wireless mesh technology allows mobile users to stay in visual contact at all times with field HQ. The MAM7700 enables mobile users to share color video images of what they are currently seeing with colleagues and supervisors in other locations. This capability can dramatically improve the efficiency and effectiveness of complex mobile operations, including police investigations, military maneuvers, construction site management, and field inspections for mining, forests, oil and gas.

Mobile communications on the MAM7700 are secured through wireless advanced 128-bit AES encryption of both backhaul and user traffic. In addition, multilevel administrative password control provides users with the highest level of security for all services and applications.

"MAM7700 is ideal for managing large-scale projects that require secure, real-time information sharing," said Max Lu, president and CEO of ArrowSpan, Inc. "It enables a mobile user to serve as the eyes and ears of coworkers stationed elsewhere so that effective decisions can be made on the spot."

The ArrowSpan MAM7700 wireless mobile mesh solution is available now. For additional product and pricing information, visit www.arrowspan.com.

About ArrowSpan, Inc

ArrowSpan Inc. develops and manufactures next-generation switching wireless full-duplex Wi-Fi wireless mesh network solutions. Our solutions enable users to expand existing wireless

networks to a wider reach with switching wireless technology. Our commitment at ArrowSpan is to develop a product that is the best-in-class, but also profitable and economical for everyone. For more information about ArrowSpan Inc. and our products, please visit <http://www.arrowspan.com>.
